

How to Keep Your VPC List Populated when Upgrading from the Trial Version to the Full Version of Virtual PC 2004.

1. Copy the VM shortcuts from `C:\Documents and Settings\%username%\Application Data\Microsoft\Virtual PC\Virtual Machines` to a temp location
2. Uninstall the trial version
3. Install the full version
4. Launch VPC, then exit (this creates the necessary directories)
5. Copy the VM Shortcuts from step 1 back to the same location

Note: This also works when moving to a new machine. Of course, the path of the VMs on the new machine needs to match the path on the old machine for the copied shortcuts to work correctly.
